

SHREYA ROY

9883077969 | shreya.roy1818@gmail.com | Chennai, Tamil Nadu

Summary

I am an aspiring Full Stack Developer with a strong interest in software development, problem-solving, and building applications. I enjoy learning new technologies and applying them to real-world projects. My goal is to become a proficient software engineer.

Education

SRM Institute of Science & Technology, Kathankulathur | Computer Science and Engineering | Chennai, Tamil Nadu **07/2028**

- Achieved a GPA of 8.80 in academics.
- Working on a research paper on Mental Depressive Disorder.
- Finalist in a few hackathons.

Assembly of God Church School, Asansol | PCMB | Asansol, West Bengal **05/2024**

- Achieved 72.4% aggregate in ISC examinations.

Assembly of God Church School, Asansol | Science | Asansol, West Bengal **05/2022**

- Achieved distinction in ICSE examinations with a score of 87% overall.

Skills

Front-End & UI: JavaScript, TypeScript, React, Tailwind CSS, Responsive Design

Back-End & Databases: Node.js, FastAPI, Java, Python, SQL Databases

AI & Architecture: AI Architectures, Multi-Agent Systems, Neuro-Symbolic Models, Acoustic Event Classification

Tools & Version Control: Git, GitHub, Cloud Deployment

Core Competencies: Algorithm Optimization (Dynamic Programming, Sorting), Technical Problem-Solving, Cross-functional Communication, Time Management

Research

Major Depressive Disorder (MDD) is commonly diagnosed through interviews and self-reported symptoms, which can be subjective and sometimes inaccurate. Since depression affects brain activity, EEG signals can provide objective information about neural patterns. This project aims to analyze EEG signals using machine learning techniques to help in the early and accurate detection of depression.

Projects

1. EchoMind

AI-powered acoustic surveillance platform for smart cities. It analyses ambient audio in real-time to detect hidden threats like gunshots, breaking glass, and human screams. With explainable AI and automated Twilio SMS alerts, it ensures rapid, transparent security responses.

2. Phishing Sentinel

An AI-powered browser security system that detects phishing websites in real time using a machine learning model and a high-performance backend built with Go. The project focuses on real-time security by analyzing a webpage's DOM to detect and block phishing sites instantly.

3. OmniShield

A brutalist, military-grade banking fraud intelligence platform that ingests multi-feed transaction telemetry to detect anomalies, map cash-routing via interactive 2D graphs, and auto-compile compliance reports, all visualized within a high-density, dark-themed real-time simulation canvas.

4. Cipher Model

AI-powered web platform that provides smart encryption, secure data handling, and modern cybersecurity solutions through an interactive and user-friendly interface.

5. SafeRide Sheild

An AI-driven parametric income insurance platform specifically designed for gig workers. Unlike traditional insurance, it utilizes external data triggers to automate payouts. A key feature is the "Rain Curfew", which uses zero-touch automation to compensate riders when adverse weather conditions prevent them from working, ensuring financial stability without a manual claims process.

6. ArmorClaw

A Delegation-Safe Multi-Agent Financial Trading System. It addresses security in automated trading by implementing an Intent Enforcement Layer. This layer acts as a gatekeeper, validating every move made by trading agents against a pre-defined security policy. By doing so, it proactively blocks unauthorized or malicious transactions, ensuring that delegated agents operate strictly within their intended bounds.

7. Student Admission Portal

Web-based management system that streamlines the student admission process with features like registration, application tracking, and secure data management through a simple and responsive interface.

8. Employee Management System

A software application designed to manage employee data, attendance, roles, and performance efficiently. It automates manual HR tasks, ensuring accuracy, transparency, and quick access to information.

9. Currency-converter

Handles real-time cross-conversion algorithms, instantly recalculating values as the user updates either the base amount or target currency pairs.

10. Amazon Clone

Designed a responsive e-commerce web interface that simulates seamless product browsing and intuitive user checkout experiences.

11. Rock-Paper-Scissor Game

Developed an interactive browser-based game featuring dynamic event handling, real-time feedback, and automated opponent logic.

12. Tik-Tack-Toe Game

Developed an interactive browser-based game featuring dynamic event handling, real-time feedback, and automated opponent logic.
